## 1. INTRODUCTION

#### 1.1 General

The new **DELTA** split wall mounted is based on the compact range. It comprise the ST (cooling only) and RC (heat pump) models, as follows:

- Cooling Only: DELTA 18ST, DELTA 21ST, DELTA 24ST
- Heat Pump: DELTA 18RC, DELTA 21RC, DELTA 24RC

The indoor **DELTA** units are available as LED display types, featuring esthetic design, compact dimensions, and low noise operation.

### 1.2 Main Features

The **DELTA** series benefits from the most advanced technological innovations, namely:

- R410A refrigerant
- Micro processor control.
- Infrared remote control with LED display.
- Indoor large diameter cross flow fan, allowing low operation sound level.
- Bended Indoor coil with treated aluminum fins and coating for improved efficiency.
- High COP.
- Easy access to the interconnecting tubing and wiring connections.
- Refrigerant pipes can be connected to the indoor unit from 5 different optional directions.
- The units are equipped.
- Water condensate tray is equipped with two optional drain connections.
- Automatic treated air sweep.
- Low indoor noise levels.
- Easy installation and service.

#### 1.3 Indoor Unit

The indoor unit is wall mounted, and can be easily fitted to many types of residential and commercials applications.

It includes:

- Casing with air inlet and outlet grills.
- A large-diameter tangential fan.
- Bended coil with treated aluminum fins.
- Motorized flaps.
- 3-speed motor with internal protection.
- Advanced electronic control box assembly.
- Interconnecting wiring terminal block.
- Mounting plate.

## 1.4 Filtration

The **DELTA** series presents several types of air filters:

- Easily accessible, and re-usable pre-filters (mesh).
- Pre-charged electrostatic filter (diposable).
- Active carbon filter (optional).
- Active Electro Static re-usable filter (optional).

## 1.5 Control

The microprocessor indoor controller, and an infrared remote control, supplied as standard, provide complete operating function and programming. For further details please refer to the Operation Manual, Appendix A.

## 1.6 Outdoor Unit

The **DELTA** outdoor units can be installed as floor or wall mounted units by using a wall supporting bracket. The metal sheets are protected by anti- corrosion paint work allowing long life resistance. All outdoor units are pre-charged. For further information please refer to the Product Data Sheet, Chapter 2.

It includes :

- Axial fan.
- Outdoor coil with hydrophilic louver fins for RC units.
- Compressor mounted in a soundproofed compartment.
- Outlet air fan grill.
- Service valves" flare" type connection.
- Interconnecting wiring terminal block.

## **1.7 Tubing Connections**

Flare type interconnecting tubing can be produced on site. For further details please refer to the Installation Manual, Chapter 11.

## 1.8 Accessories

#### ASK (All Season Kit):

For low ambient working conditions in cooling, an ASK can be installed inside the outdoor unit. This kit allows cooling operation down to outdoor temp of -10 oC by gradually controlling the outdoor fan speed motor.

#### RCW Wall Mounted Remote Control

The RCW remote control is mounted on the wall, and controls the unit either as an infrared remote control or as a wired controller. The wired controller can control up to 10 Indoor units with the same program settings and adjustments.

## For further details please refer to Optional Accessories, Chapter 15.

## 1.9 Inbox Documentation

Each unit is supplied with its own installation and operation manuals.

## 1.10 Matching Table

### 1.10.1 R410A

OL					
MODEL REFRIGER.			DELTA 18	DELTA 21	DELTA 24
	GC 18 ST/RC	R410A	$\checkmark$		
	GC 22 ST/RC	R410A		$\checkmark$	
	GC 24 ST/RC	R410A			$\checkmark$
	OU7-24	R410A			$\checkmark$
	OU7-24Z	R410A			$\checkmark$

The above table lists outdoor units and DELTA indoor units which can be matched together. In addition the listed outdoor units can be matched with other types of indoor units such as cassettes, floor/ceiling. For further information please refer to the relevant Service Manual.

## 2. PRODUCT DATA SHEET

When the outdoor unit is installed above the indoor unit an oil trap is required every 5m along the suction line at the lowest point of the riser. Incase the indoor unit is installed above the outdoor, no trap is required.

# 12. CONTROL SYSTEM DELTA18-21-24 TYPE UNITS

### **12.1** Electronic Control

#### 12.1.1 Introduction

The electronic control information is designed for service applications, and is common to the following groups of air-conditioners:

- ST/ RC group -Cooling only / cooling and heating by heat pump.
- **SH group** -Cooling and heating by heat pump and supplementary heater.
- **RH group** -Cooling, heating by heaters only.

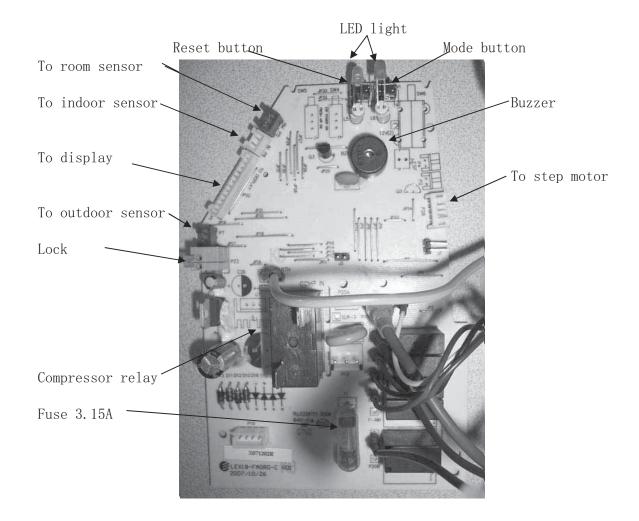

#### 12.1.2 Jumpers Settings

# 12.3 Main PCB Controller

## 12.4 General functions

### 12.4.1 COMP operation

For each Mode including POWER OFF & SB, a Min time delay of 3 min before COMP restarting, excluding DEICING Mode

The Min operation time of COMP under different operating conditions is

Operation Mode	Min operation time of COMP	
Heat, Cool or Auto Modes	3 min.	
Fan, Dry, Overflow, Protection modes, or mode change	ignored	

#### 12.4.2 IFAN operation

- Min time interval between IFAN speed change in AUTOFAN Mode, is 30 sec.
- Min time interval between IFAN speed change in H/M/L Mode is 1 sec.
- IFAN speed in Heat/Cool Autofan Mode is determined according to the following table:

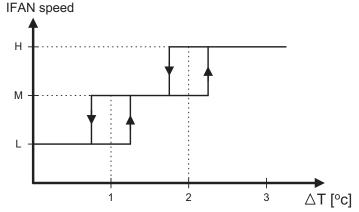

ΔΤ	IFAN Speed
$\Delta T \ge 2$	HIGH
$2 \ge \Delta T \ge 1$	MED
$1 \ge \Delta T$	LOW

where in Heat Mode: $\Delta T = SPT-RT$ 

in Cool Mode:∆T = RT-SPT

Note:

- In Heat Mode, the rules in section 4.0.3 have the higher priority.
- The table above can be represent by a hysteresis curve which will minimize the switching of the IFAN relay and will minimize the change in IFAN speed:

#### 12.4.3 OFAN operation

- Min time interval between OFAN ON/OFF state change is 30 sec.
- In general, OFAN starts together with COMP.

#### 12.4.4 HE operation

- Minimum Heaters <u>ON or OFF</u> time is 30 sec.
- Heaters can be activated <u>only</u> if IFAN is on.

#### 12.4.5 **Protections**

- High pressure protection is applicable to all operating modes.
- Deicing control is valid in Heat and Auto Heat Mode only.
- Defrosting control is valid in Dry, Cool, Heat and Auto Modes.
- No reset after protection modes.

#### 12.4.6 Thermistors operation

- Return air Temp. is detected by RAT (RT1) in normal Mode, or by RCT (R/C sensor) in I-FEEL Mode.
- Indoor Coil Temp. is detected by ICT (RT2).

#### 12.4.6.1 Definition of thermistor faults:

- a. Thermistor is disconnected -The thermistor reading is below -30°c.
- b. Thermistor is shorted -The thermistor reading is over 75°c.
- c. Thermistor Temp reading doesn't change (irrelevant for RT1) -
  - (i) This test is performed <u>only once</u> after a unit is switched from OFF/STBY to operation. At the <u>first occurrence</u> of 10 min continuous COMP operation, the current ICT & OCT are compared with those when the COMP was switched from OFF to ON 10 min before. If the  $\Delta$ T is less than 3°c, the thermistor is regarded as defective.
  - (ii) The ICT and OCT no-change error can be disabled together by connecting a4.7 kohm resistor (5%) to the OCT connector. These resistors are equivalent to a thermistor at 43+/-1°c and 48+/-1°c respectively.
  - (iii) Connecting a 4.7k resistor to the ICT connector will disable the ICT no-change error only.

#### 12.4.6.2 Cases for disabling thermistor short/disconnected detection

- i. The detection of thermistor faults (a) and (b) above, are disabled when Deicer Protection is started. The detection will be enabled again only after (1) the deicing is completed, and (2) COMP has been restarted and operated for 30 sec.
- ii. When all the following conditions are fulfilled:
  - a. 4.7K Ohm resistor is connected on the OCT
  - b. IFAN is OFF
  - c. Compressor is ON
  - d. ICT < -30 (disconnected)

This condition come to detect and prevent IFAN operation in Deicer in multi spilt units.

#### 12.4.6.3 Handling the thermistor faults in a COMP unit

i. ICT/OCT thermistor is disconnected or shorted -

The invalid thermistor temperature is replaced by 43°c, so that the unit can continue the normal operation. All protections related to that faulty thermistor will be disabled. For example, in case of any ICT fault, the ICT high pressure protection in Heat Mode and ICT defrost protection in Cool Mode will not operate anymore. The same is also applied to the OCT fault.

ii. RAT thermistor is disconnected or shorted -

The RAT will be derived from the ICT by using the equations :

Heat Mode: RAT=ICT/2.3 Cool Mode RAT=ICT\*4

Notes:

- In case of any thermistor failure, the STBY LED will be blinking until the fault condition is corrected.
- User can use the system diagnostics function to find out the nature of the thermistor faults.
- i. RAT thermistor is disconnected or shorted –

System will operate continuously in the last IFAN & WVL status when turned ON.

Notes:

• As in the COMP unit, the STBY LED will be blinking to indicate a thermistor fault. And, the user can use the system diagnostics function to find out the nature of the fault.

### 12.5 Cooling Mode - General

- 1) Room Temperature, RT, is detected by
  - RAT in normal operation, or
  - RCT (R/C sensor) in I-FEEL mode.
- 2) The resolution of RT is 1°c.
  - RT is activating COMP/WVL if (RT > SPT), and
  - RT is stopping COMP/WVL if (RT =< SPT).
- 3) Indoor Coil Temp is detected by ICT (RT2).
- 4) Outdoor Coil Temp is detected by OCT (RT3).
- 5) A WVL-RC/SH will work in Cooling Mode when
  - ICT < 16°c in general (see Sect 2.2.2 for details), and
  - Unit is not operating in Fan Mode.
- 6) OFAN OPERATIONS
  - OFAN starts together with COMP in general.

#### 12.5.1 Cooling

Mode: Cool, Auto (at Cooling) Temp: Selected desired temperature. Fan: HIGH, MED, LOW Timer: Any I Feel: On or Off

Control function

Maintains room temp at desired level by comparing RT and SPT. (RT - SPT) [°c] +3 +2 +1 0 -1 -2 ON COMP OFF (WVL) ON OFAN OFF SER FAN SPEED IFAN ON RV OFF

Note:

- 1) IFAN is always running at High, Medium or Low speed selected by user.
- 2) In IFEEL mode, the Room Temperature (RT) is the RCT from a R/C. Otherwise, the RT is the RAT from the Room Thermistor.

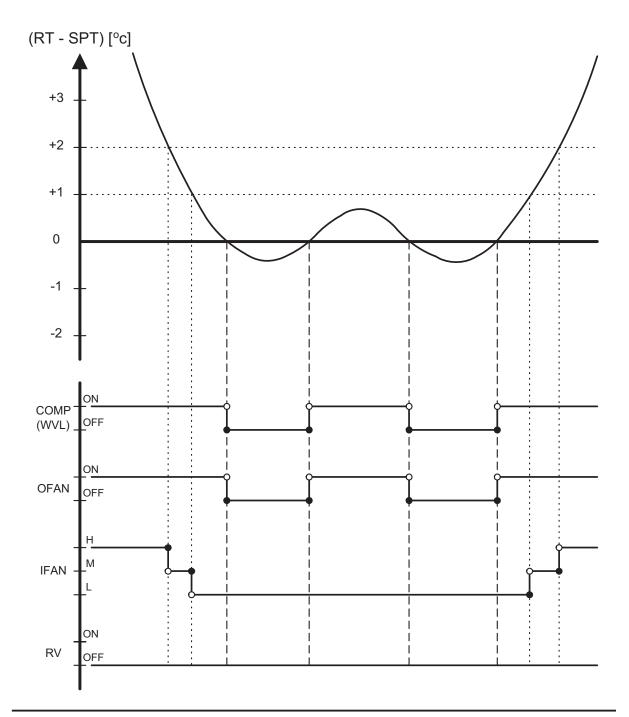

12-8

#### 12.5.2 Cooling with Autofan

Mode: Cool, Auto (at cooling) Temp: Selected desired temperature Fan: Auto Timer: Any I Feel: On or Off

Control function

Maintains room temp at desired level and controls the IFAN speed for optimal comfort.

### 12.6 Heating Mode

#### 12.6.1 Heating Mode - General

• In heating Mode, temp. compensation schedule will be activated for wall mounted units.

	Add to SPT		
SPT [°c]	I-FEEL ON	I-FEEL OFF	
$18 \le SPT \le 27$	0 °C	+2 °c	
27 < SPT ≤ 30	0 °C	+3 °c	

Notes :

• No compensation will be activated in Forced operation modes

#### 12.6.2 IF operating rules

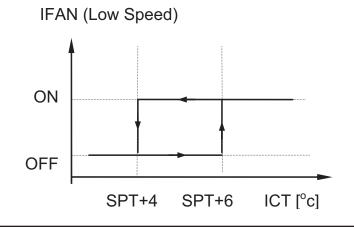

- As a general rule for **RC and SH groups**, when **COMP is ON**, excluding protection modes, IFAN will be switched ON if
- ICT > 35°c or
  - at the IFTC 30 sec after the COMP is switched ON. In this case, the IFAN will be started at low speed.

Notes :

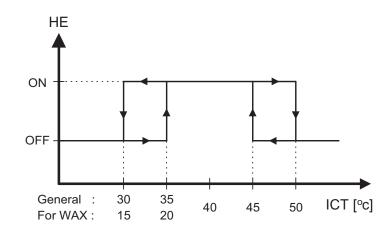

- 1) In **SH or RC group**, if HE is set to OFF due to low ICT, IFAN will be switched to LOW and will be turned OFF after 30 sec.
- 2) An exception to this rule (4.0.3.a) is the Back-up mode for SH.
- In RC and SH groups, whenever COMP & HE are both OFF, excluding protection modes, IFAN operation will be according to the following:

In **other models** IFAN will operate in low speed for 30 sec and then stop. If COMP is OFF for more than 3 minutes and IFEEL Mode is inactive, IFAN will operate in low speed according to the following graph:

#### 12.6.3 <u>HE operation</u>

- For all Groups, HE can be ON only when IFAN is ON.
- For **all Groups**, HE switches to OFF when ICT > 50 °c, and is activated again when ICT  $\leq$  45°c.
- In **SH or RC group**, HE operation is limited by the following graph:

#### • Back-up mode for SH group

After COMP has been working for 5 minutes, HE & IFAN are activated even if the ICT is still below 35°c. This situation is called Back-up Mode. Both HE & IFAN will work in Back-up Mode until the ICT reaches 35°c. Then, the operation goes on in the usual mode .

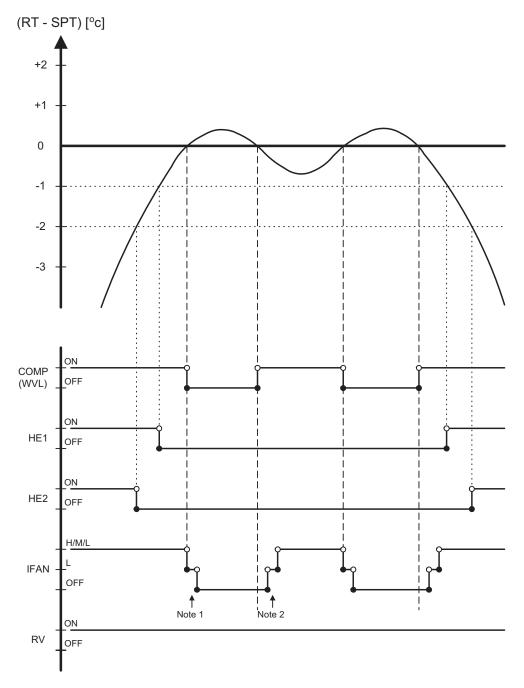

### SM DELTA 1-E.0 GB

#### 12.6.4 Heating, RC or SH Group

Mode: Heat, Auto (at heating) Temp: Selected desired temperature Fan: HIGH, MED, LOW Timer: Any I Feel: On or Off

#### **Control function**

Maintains room temp. at desired level by comparing RAT or RCT to SPT.

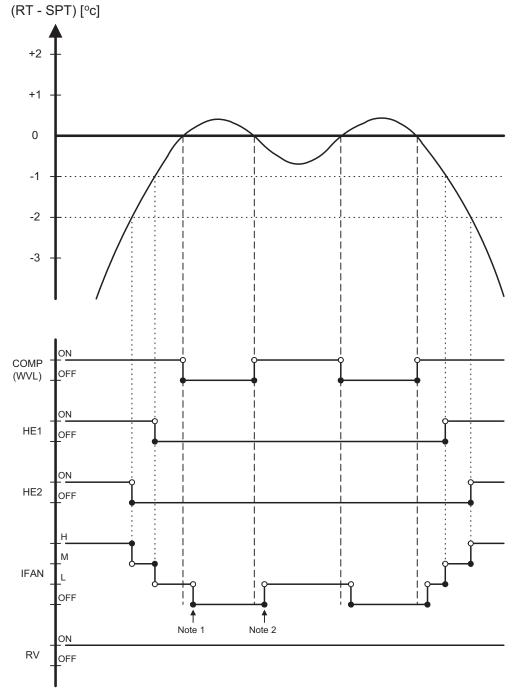

#### 12.6.5 Heating, RC or SH Group with Autofan

Mode: Heat, Auto (at heating) Temp: Selected desired temperature Fan: Auto Timer: Any I Feel: On or Off

#### Control function

Maintains room temp at desired level by controlling COMP, IFAN and OFAN.

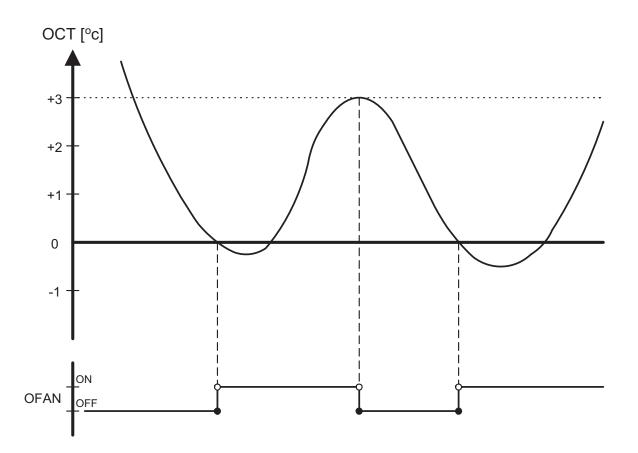

### 12.6.6 OFAN operation is controlled by the graph below when

- 1. (RAT  $\geq$  SPT 2°c), AND
- 2. (ICT  $\geq$  45°c), AND
- 3. (COMP is ON)

Otherwise, OFAN runs together with COMP.

## 12.7 Automatic Cooling or Heating

#### 12.7.1 Automatic Cooling or Heating - General

- Switching-temperature between Cooling and Heating is SPT  $\pm$  3°c.
- Autofan in Automatic Cooling and Heating Mode will activate "Cooling with Autofan Mode" and "Heating with Autofan Mode" respectively.
- When the Auto Mode is started with SPT +/-0°c, the unit will not select Auto Heat or Auto Cool mode immediately. Instead, the unit will be in a temporary Fan Mode with IFAN operating at low speed. The proper Auto Heat mode or Auto Cool will be started whenever the RT reaches SPT-1°c or SPT+1°c respectively.
- For RC & SH units, Mode change between Auto Heat & Auto Cool Modes is possible only after the COMP has been OFF during the last T minutes.

Mode Change	time, T
Auto Cool to Auto Heat	3 min
Auto Heat to Auto Cool	4 min

• When unit is changed form Cool/Dry mode to Auto Mode, the unit will continue to operate at (Auto) Cool Mode until the conditions for switching from Auto Cool to Auto Heat are satisfied.

Similarly, when unit is changed from Heat Mode to Auto Mode, the unit will continue to operate at (Auto) Heat Mode until the conditions for switching from Auto Heat to Auto Cool are satisfied.

### 12.7.2 Auto Cooling or Heating, RC or SH Groups

Mode: Auto

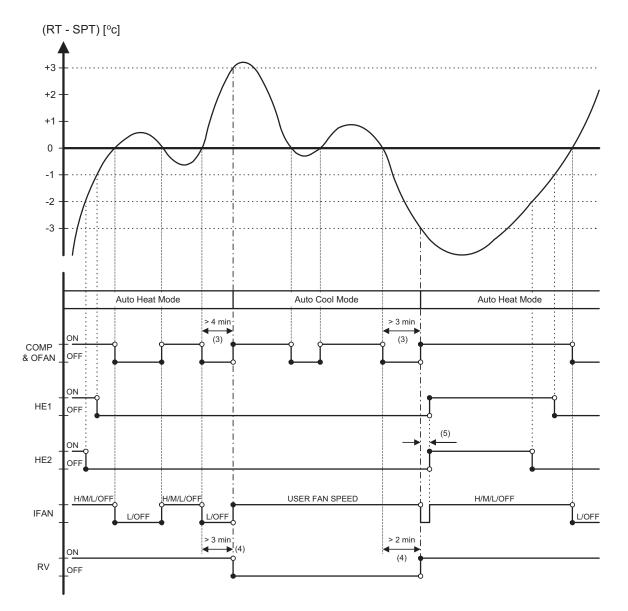

Temp: Selected desired temperature

Fan: Any Timer: Any

I Feel: On or Off

**Control function** 

Maintains room temp at desired level by selecting between cooling and heating modes.

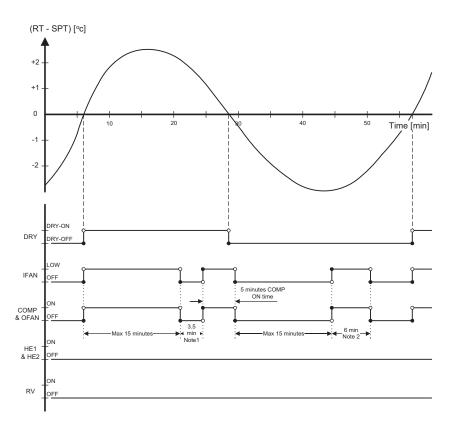

### 12.8 Dry Mode

#### 12.8.1 Dry, ST or RC group

Mode: Dry Temp: Selected desired temp Fan: Low (automatically selected by software) Timer: Any I FEEL: Any

Control function

Reduce room humidity with minimum temp. fluctuations by operating in Cool Mode with low speed IFAN.

Notes :

- When Dry is ON, the COMP is forced OFF for 3.5 min (longer than the 3 min Min COMP-Off time) after every 15 min of continuous COMP operation.
- When Dry is OFF, the COMP is forced ON for 6 min (longer than the 3 min Min COMP-On time) after every 15 min of continuous COMP OFF time.
- When Dry is changed from ON to OFF or vice versa, the limits mentioned in (1) & (2) are ignored. The COMP operation is only controlled by the 3 min Min OFF time and 1 min Min ON time.
- In Dry Mode, IFAN is LOW when COMP is ON, and is OFF when COMP is OFF.

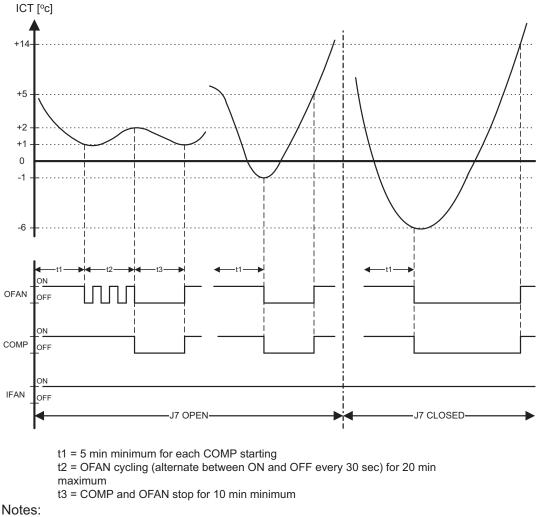

#### 12.9 Protection

#### 12.9.1 **Cooling Mode Protections**

Indoor Coil Defrost Mode: Cooling, Dry, Auto Temp: Selected desired temp. Fan: Any Timer: Any I Feel: On or Off

#### Control Function

Protect the indoor coil from ice formation at low ambient temperature.

- When J7 is closed (connected), OFAN cycling is cancelled and the
  - set temperature for COMP & OFAN cut-out and cut-in are changed. COMP & OFAN are forced OFF when ICT =< -6°c, and are kept OFF until ICT > 14°c.
  - For WAX model, the defrost processes is simpler. When J7 is open, COMP & OFAN are forced OFF when ICT =< -1°c, and are kept OFF until ICT > 5°c. When J7 is closed, the WAX defrosting process is the same as that of the other models (R.H.S. of the graph above). In both cases, the ICT checking in t2 and t3 are not applied.

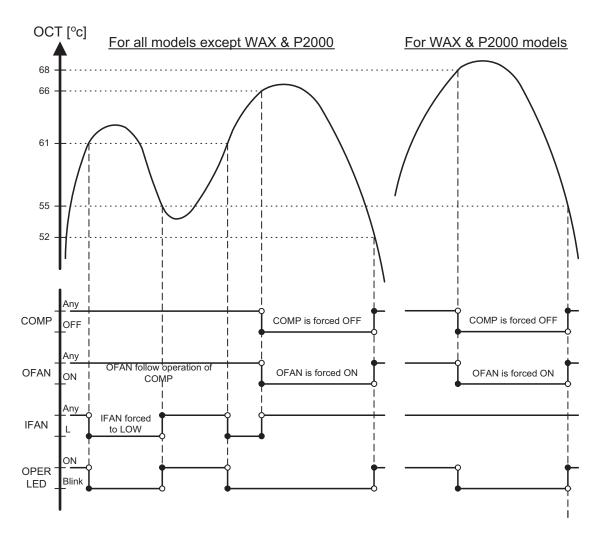

FLECTRF

#### 12.3.2 High Pressure Protection

Mode: (Auto) Cooling or Dry Temp: Selected desired temp. Fan: Any Timer: Any I Feel: On or Off

Control Function

To protect the COMP from the high pressure built-up in the outdoor coil during normal cooling operation, by switching OFF the IFAN and COMP.

Note:

• The ICT is also monitored during Cool and Dry mode, in case the RV control circuit is faulty. Whenever ICT reaches 70°c, which indicates a high pressure in the indoor coil, the COMP will be forced off automatically. The COMP can be turned on again only after the ICT is under 70°c again and after the 3 min COMP ON delay time. The OPER LED will not blink in this case.

#### 12.9.3 Heating Mode Protections

#### **Outdoor coil Deicing (excluding RH Group)**

Mode: Heating, Auto (at heating) Temp: Selected desired Temp Fan: Any Timer: Any I FEEL: Any

#### **Control function**

Protects the Outdoor coil from ice formation by controlling COMP & RV operation.

#### Scope

This new deicer is designed to operate at extreme temp conditions. The deicing cycle could be triggered from:

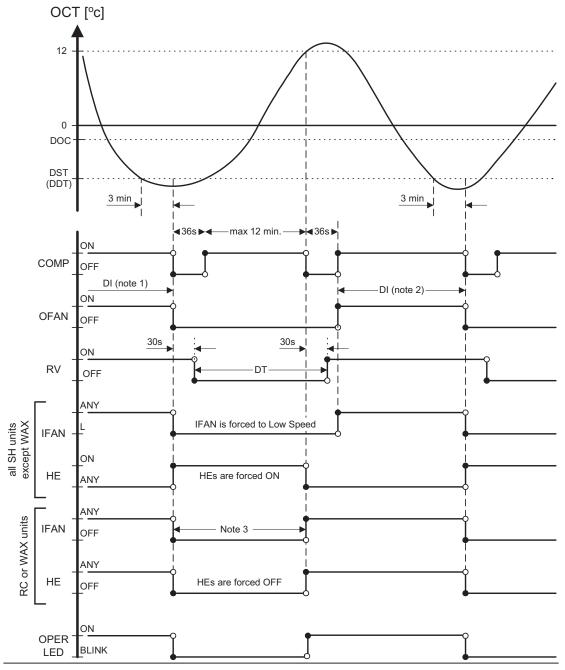

1. OCT temp and time between two consecutive deicing cycles.

2. Detection of ice forming by change of the OCT temp.

Both algorithms adjust the time between deicing cycles to optimize the A/C performance. The algorithm will automatically increase the time between deicing cycles and reduce the deicing cycle as needed.

The algorithm uses EEPROM data to operate.

Deicing procedure

Notes :

- At the first COMP activation after SB or OFF, if (OCT < 0°c), then DI = 10 min, else DI = 40 min.
- In the following Deicing cycles, the time interval between two Deicing cycles activation is between 30 to 80 min (refer to the flow chart).
- For RC group, HEs are forced OFF. IFAN operation is as in Heat Mode, Sect 4.0.3.a, i.e. IFAN will be set to OFF when ICT<30°c. For WAX, the IFAN is simply forced OFF.
- For SH group, HEs are forced ON and IFAN is forced to operate in Low speed, regardless of the ICT and difference between RAT & SPT.

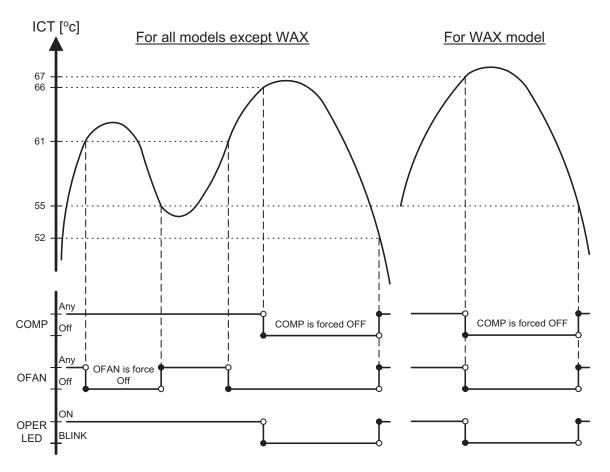

### SM DELTA 1-E.0 GB

#### 12.9.4 High pressure protection (excluding RH Group)

Mode: (Auto) Heating Fan: Any Timer: Any I Feel: On or Off

#### Control Function

Protect the Compressor from high pressure by switching OFF the OFAN and COMP.

Notes:

- IFAN, HE1 and HE2 will be activated according to the relevant Heating Mode Sect.
- In case of any malfunction in the relay control circuit, the OCT is also monitored during heating mode. Whenever OCT reaches 70°c, which indicates a high pressure in the outdoor coil, the COMP will be forced off automatically. The COMP can be turned on again only after the 3 min COMP ON delay and the OCT is under 70°c. The OPER LED will not blink in this case.

### 12.10 Timer

Mode: Any Temp. Selected desired temp Fan: Any Timer: Timer On, Timer Off I Feel: On or Off

#### Control function

• Starts or stops the unit operation after pre-set time. If RC-1 is used, the timer setting will be (0.5 - 24 Hr) from the moment the timer is set. The minimum resolution is 30 minutes.

If RC-2 or later version of remote controls is used, the timer setting will be (0:00 - 23:50) real time with 10 minutes resolution.

• After power failure, all pre-set timers are cleared. The system is forced to STBY mode and the Timer LED indicator is blinked to indicate the situation. The LED keeps blinking until the timer settings can be reloaded from a R/C message.

Note: If all timers are inactive, the system will not be forced OFF after the power failure. The last OPER/STBY status will be loaded from the EEP instead.

• When the A/C receives any valid message from a R/C, the current ON/OFF timer settings will be replaced by the new timer settings in the R/C message.

Note: The following timer related operations will not affect the A/C operating mode (Heat/Cool/Auto/Dry/Fan) setting.

- Set ON/OFF timer
- Clear ON/OFF timer
- R/C ON Timer is time-up
- R/C OFF Timer is time-up
- E.g. When a STBY A/C unit (with Cool Mode setting in its EEP) is turned on by the ON-TIMER of a R/C with heat mode setting, the A/C will start in Cool Mode.

# 12.11 Forced Operation

Forced operation allows units to start, stop and operate in Cooling or Heating in pre-set temperature according to the following table:

Forced operation	Pre-set Temp for :
mode	WMF, WMN, WNG models
Cooling	22°C
Heating	28°C

Note:

- While under the forced operation, the temperature compensation schedule.
- The forced operation is activated when the mode button on the Display Board is used to switch the unit to Cool or Heat mode.
- The IFAN is always set to Autofan Speed in forced operation.

### 12.12 Sleep Mode

Mode: Any

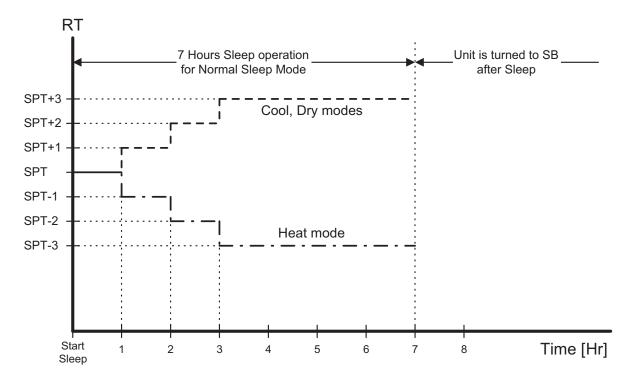

Temp: Set – desired temperature selected Fan: Any Timer: Interact with Sleep Timer as described in sect 12.2 I Feel: On or Off

The Sleep mode is activated by using the sleep button on the R/C. In Sleep Mode, the unit will automatically adjust the SPT to turn up/down the room temperature (RT) gradually to provide maximum comfort to the user in sleep.

Sleep is treated as TIMER function. Therefore, the TIMER LED is activated similar to TIMER function.

### 12.12.1 Adjustment in Sleep Mode

- 1. in cool, auto cool or dry modes, the SPT adjustment is positive (from 0 to +3°c).
- 2. In heat or auto heat modes, the SPT adjustment is negative (from 0 to -3°c).
- 3. In other modes, there is no SPT adjustment.
- 4. The SPT adjustment is cancelled when the Sleep mode is cancelled.

Note: If Off-timer is active, the unit may go to SB before or after 7 hours of sleep operation.

#### SM DELTA 1-E.0 GB

#### 12.12.2 Time adjustment in Sleep Mode

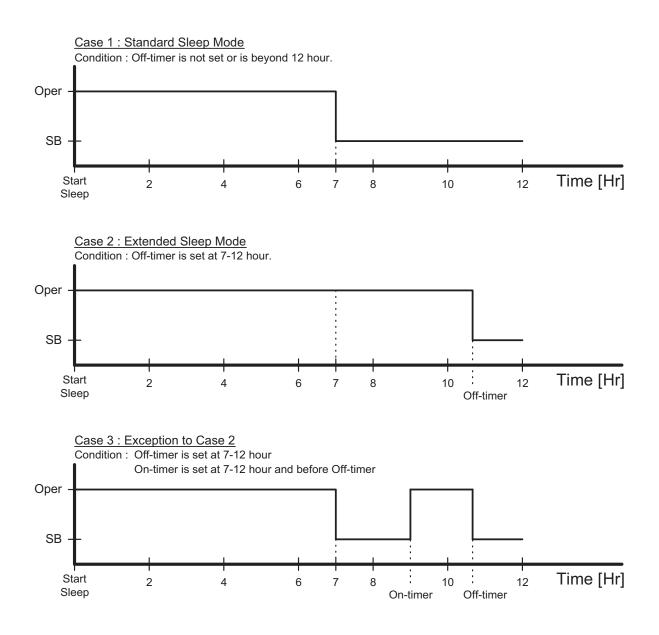

The user can make use of the Off-Timer to extend the Sleep Time from 7 hours to 12 hour (max). The operation of the new "Extended Sleep Mode" is illustrated by the graphs below.

Case 1 is the Standard Sleep Mode, which is the only sleep mode in previous version of MCU. The A/C unit simply works for 7 hours, then goes to SB.

Case 2 is the new Extended Sleep Mode. If an active Off-Timer is set to turn off the A/C between 7-12 hour, relative to the starting of Sleep, the Sleep time is extended.

And, instead of going to SB at the 7th hour, the A/C will work until reaching the Off-time.

Case 3 is an exception to case 2. The Sleep Mode will not be extended to the Off-Time when the Off-Timer is preceded by an On-Timer, which is also between 7-12 hour.

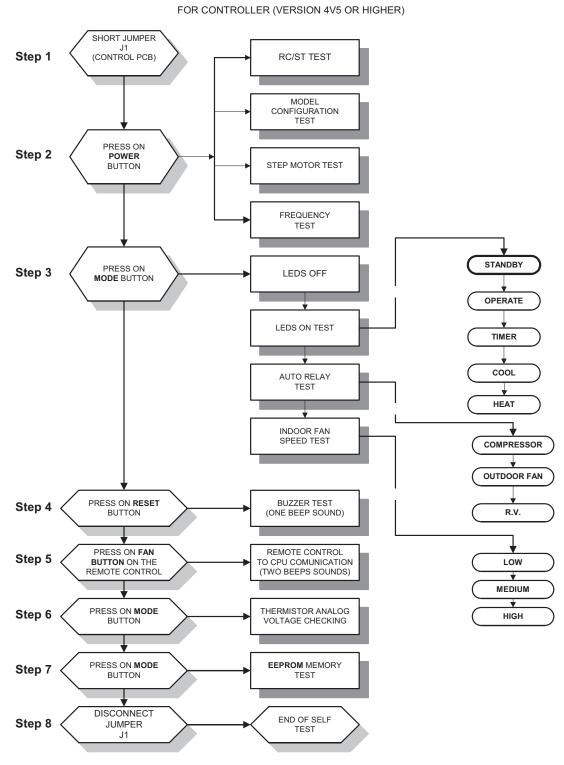

# 12.13 Clogged Air Filter

Filter LED ON after 512 HR.

Filter LED is turned OFF, and the Filter Timer is restarted by pressing the reset button.

## 12.14 Controller Self-Test Procedure

### 12.14.1 By Shorting Test Jumper J1

12-28

### 12.14.2 By Remote Control Settings:

- a. 1: TURNING ON THE POWER. Turn ON the power, make sure that the unit is in operation.
- b. STEP 2 : ENABLE SELF-TEST MODE
  - Use the remote control to send the first settings to display / indoor unit HEAT mode, HIGH IFAN, set temperature to 16 °C, no I-FEEL Sleep or any other timer settings are needed.
  - Cover the IR transmitter components in the remote control so that it will not transmit the signals to the indoor unit display.
  - Use the remote control to send the second settings to display / indoor unit COOL mode, LOW IFAN, no I-FEEL Sleep or any other timer settings.
  - Uncover the remote control IR transmitter and change the temperature settings. If the display/indoor unit receive the settings properly the following steps will start:
- c. STEP 3: MODEL SETTING CONFIRMATION
  - The STAND-BY and COOL LEDS will indicate the operation mode as follows:

OPERATION MODE	STAND-BY LED	COOL LED
ST	ON	OFF
RC	OFF	OFF
SH	OFF	ON
RH	ON	ON

• Testing the Model configuration. Selected by the COMP, STAND-BY, TIMER LEDS and FILTER will indicate the model configuration as follows (the relevant line for this manual is highlighted):

MODEL	COMP	OPERATE LED	TIMER LED	FILTER LED
WNG	ON	OFF	OFF	OFF
WMN1	ON	ON	OFF	ON
WMN4	OFF	OFF	ON	OFF
WMN2/WHX	OFF	ON	OFF	ON
WMN3	OFF	ON	ON	ON

In this term the step motor will turn to HOME POSITION.

- d. STEP 4 : AUTO LED WALK TEST.
  - All the LEDS will turn OFF.
  - All the LEDS will turn ON for 1 second one by one in the following sequence:

STAND-BY ⇒ OPERATE ⇒ TIMER ⇒ FILTER ⇒ COOL ⇒ HEAT.

- In PRX all the LEDS will turn ON for 1 second one by one in the following sequence : 18 °c ⇒ 20 °c ⇒ 22 °c ⇒ 24 °c ⇒ 26 °c ⇒ 28 °c ⇒ 30 °c ⇒ High IFAN ⇒ Auto IFAN ⇒ Med IFAN ⇒ Low IFAN ⇒ STAND-BY⇒ TIMER ⇒ FILTER ⇒COOL⇒ HEAT.
- e. STEP 5: AUTO REALY WALK TEST:
  - All relays will energize one by one in the following sequence:

COMPRESSOR ⇒ OUTDOOR FAN⇔R. V. ⇒ HEATER 1 ⇒ HEATER 2 ⇒ INDOOR WATER PUMP ⇒ SWING or OUTDOOR WATER PUMP ⇒ INDOOR FAN: LOW ⇒ MID ⇒ HIGH.

- When the relay walk test is completed, the next test will start automatically.
- f. STEP 6: FREQUENCY TESTING:
  - If the frequency measuring process fails the COOL LED will turn ON. In order to move to the next step, press ON/OFF button on the remote control.
- g. STEP 7: INPUT TEST.
  - The test purpose is to check the analog real time indicators (thermistors, LEVEL and clock) according to the table below.

LED Indicator	Condition for LED to be ON	
STBY LED	Room thermistor $\neq 25^{\circ}c$	
OPER LED	Indoor coil thermistor ≠ 25°c	
TIMER LED	Outdoor coil thermistor ≠ 25°c	
FILTER LED	Clock	
COOL LED	LEVEL 2&3	
HEAT LED	LEVEL 4	

- h. STEP 8: TIMING RESET TEST (WATCH DOG).
  - The test purpose is to verify that the CPU rise time after power failure is between 1 to 3 sec, test results are indicated on the LEDS : STAND-BY,OPER, TIMER and FILTER turning ON one by one.
  - The results of the test are coded as follows:

Pass condition:

1 sec - STAND-BY and OPER are turned ON

2 sec - STAND-BY, OPER and TIMER are turned ON

Fail condition:

- 0 sec STAND-BY is turned ON
- 3 sec STAND-BY, OPER, TIMER and FILTER are turned ON
- When the timing reset test is completed, the next test will start automatically.
- i. STEP 9: MEMORY TEST (EEPROM)
  - The test purpose is to check if the memory is functioning correctly. The test result is reported by using the STAND-BY and FILTER LEDS:

LED Indicator	Condition for LED to be ON
STAND-BY LED	Test passed
FILTER LED	Test failed

AT THIS POINT THE SELF-TEST IS COMPLETED.

In order to terminate Self-Test mode the User can change the unit setting from COOL Mode, LOW FAN to COOL Mode, MED FAN or to wait without using the remote control for 60 sec.

Temp. (*C)	Voltage (V)						
-20	4.554	2	3.744	24	2.555	46	1.487
-19	4.529	3	3.695	25	2.5	47	1.447

#### Values of Sensors Temperature VS. Voltage (DC)

#### SM DELTA 1-E.0 GB

### **12.15 On Unit Indicators and Controls**

STAND BY INDICATOR	Lights up when the Air Conditioner is connected to power and ready to receive the R/C commands Blinks continuously in case of any thermistor failure.
OPERATION INDICATOR	Lights up during operation. Blinks for 300 ms, to announce that a R/C infrared signal has been received and stored. Blinks continuously during • OCT High Pressure Protection Mode • ICT High Pressure Protection Mode • Deicing in Heating Mode • Water Over Flow in ECC Model
TIMER INDICATOR	Lights up during Timer and Sleep operation.
FILTER INDICATOR	Lights up when Air Filter needs to be cleaned. Blinks during Water Over Flow in MBX/P2000 models.
COOLING INDICATOR	Lights up when system is switched to Cool Mode by using the Mode Switch <u>on the unit</u> . Show the thermistor status in Diagnostic Mode
HEATING INDICATOR	Lights up when system is switched Heat Mode by using the Mode Switch <u>on the unit</u> . Show the thermistor status in Diagnostic Mode.
MODE BUTTON (Cool, Heat, SB)	Use to cycle the operation mode of the A/C unit among COOL, HEAT and SB modes, without using the R/C. Every time this switch is pressed, the next operation mode is selected, in this order : SB → Cool Mode → Heat Mode → SB → Press this button continuously for 5 sec or more to start the Diagnostic Mode.
RESET / FILTER BUTTON	When the Filter LED is ON, press to turn off the Filter LED after a clean filter has been reinstalled. When the Filter LED is OFF, use this button to enable/disable the buzzer announcer.

#### 12.16 Clock Random Delay From 0 to 2.5 seconds

- 0 = Clock Switch Open
- 1 = Clock Switch close

The Clock is activate according to the following table:

A/C STATE (before clock is changed)	CLOCK STATE (before clock is changed)	CLOCK ACTION (clock is changed)	A/C NEW STATE (after clock is changed)
ON	1	0	OFF
OFF	0	1	ON
OFF by interrupt <sup>(1)</sup>	1	0	OFF
ON by interrupt <sup>(1)</sup>	0	1	ON

Notes :

- 1. Clock can be interrupted by :
  - R/C POWER ON/OFF Push-button.
  - R/C TIMER.
  - R/C SLEEP.
  - A/C MODE SWITCH.
- 2. Any change in the CLOCK level during the first 6 sec after the system Reset is ignored.

#### 12.2 System Diagnostics

Pressing Mode button for 5-10 seconds in SB or any other operation mode will activate diagnostic mode by the acknowledgment of 3 short beeps and lighting of COOL and HEAT LEDs.

In diagnostic mode, system problems will be indicated by blinking of Heat & Cool LEDs.

The coding method will be as follow:

Heat led will blink 5 times in 5 seconds, and then will be shut off for the next 5 seconds. Cool led will blink during the same 5 seconds according to the following table:

No	Problem	0	0	0	0	0
1	RT1 is disconnected	0	•	•	•	•
2	RT1 is shorted	0	•	٠	٠	0
3	(Reserved)	0	•	•	0	•
4	RT2 is disconnected	•	0	•	•	•
5	RT2 is shorted	•	0	•	•	0
6	(Reserved)	•	0	•	0	•
7	RT2 temp reading doesn't change	•	0	٠	0	0
8	RT3 is disconnected	•	•	0	٠	•
9	RT3 is shorted	•	•	0	٠	0
10	(Reserved)	٠	•	0	0	•
11	RT3 temp reading doesn't change	•	•	0	0	0
12	RT2 & RT3 temp reading doesn't change	•	0	0	0	0

#### • - ON, • - OFF

Notes:

1. If faults occur in more than one thermistor (except case number 12 on<br/>table above), only one fault will be indicated according to the followingthe<br/>order:<br/>order:RT3, RT2, RT1.

2. A/C will jump out to normal mode if sending a command by the R/C in the system diagnostics mode. If this command from the R/C contain a Group ID, this ID will become the new Group ID of the ELCON unit.

# 13. TROUBLESHOOTING

Nº	SYMPTON	PROBABLE CAUSE	CORRECTIVE ACTION
1.	The stand-by indicator (red led) on the central control display panel doesn't light up.	There is no correct voltage between the line and neutral terminals on main P.C.B	<ul> <li>-If the voltage is low repair power supply.</li> <li>-If there is no voltage repair general wiring.</li> <li>-If there is correct voltage replace main or display P.C.B'S</li> </ul>
2.	The operation indicator (green led) on the central control display panel does not light up.	The remote control batteries are discharged	-Replace batteries of the remote control.
3.	The operation indicator (green led) does not light up when starting from unit.	Check main P.C.B and display P.C.B	-Replace P.C.B if necessary.
4.	The indoor fan does not function correctly.	Check the voltage between indoor fan terminals on the main P.C.B	-If there is voltage replace capacitor or motor.
5.	The outdoor fan does not function correctly.	Check the voltage between out door fan terminals on the main P.C.B	-If there is no voltage replace main P.C.B
		There is voltage between outdoor fan terminals on the outdoor unit.	-Replace capacitor or motor.
		There is no voltage between outdoor fan terminals on the outdoor unit.	-Check and repair electrical wiring between indoor and outdoor units
6.	The compressor does not start up.	Check voltage on compressor terminals on the outdoor unit. (with	-If no voltage replace main P.C.B
		ammeter) Check if there is correct voltage between compressor terminals on the outdoor unit.	<ul> <li>-If low voltage repair power supply.</li> <li>-If the voltage correct replace capacitor or compressor.</li> <li>-If there is no voltage repair electrical</li> </ul>
			wiring between indoor and outdoor units.
7.	The refrigeration system does not function correctly.	Check for leaks or restrictions. With ammeter. Pressure gauge or surface thermometer.	-Repair refrigeration system and charge refrigerant if necessary.
8	No cooling or heating only indoor fan works.	Outdoor fan motor faulty or other fault caused, compressor overload protection cut out.	-Replace P.C.B. -Outdoor fan blocked remove obstructions.

Nº	SYMPTON	PROBABLE CAUSE	CORRECTIVE ACTION
9.	Only indoor fan and compressor working.	Outdoor fan blocked.	-Remove obstructions.
10.	Only indoor fan working.	-Run capacitor of outdoor fan motor faulty. -Windings of outdoor fan are shorted.	-Replace capacitor. -Replace motor.
11.	No cooling or heating takes place, indoor fans working.	<ul> <li>Overload safety device on compressor is cut out (low voltage or high temperature).</li> <li>Compressor runs capacitor faulty.</li> <li>Compressor windings are shorted.</li> </ul>	-Check for proper voltage, switch off power and try again after one hour. -Replace compressor capacitor. -Replace compressor.
12.	No air supply at indoor unit, compressor operates.	-Indoor fan motor is blocked or turns slowly. -Indoor fan run capacitor faulty. -Motor windings are shorted.	-Check voltage, repair wiring if necessary. -Check fan wheel if it is tight enough on motor shaft, tighten if necessary.
13.	Partial, limited air supply at indoor unit.	Lack of refrigerant (will accompanied by whistling noise) cause ice formation on indoor unit coil in cooling mode.	-charge the unit after localizing leak.
14.	Water accumulates and over flow from indoor unit section.	Drain tube or spout of drain pan clogged.	-Disassemble plastic drain tube from spout of indoor unit drain pan.
15.	Water dripping from outdoor unit base, (in heating mode).	Water drain outlet is clogged.	-Open outdoor unit cover clean out water outlet clean the base inside thoroughly.
16.	Freeze-up of outdoor coil in heating mode, poor heating effect in room, indoor fan operates.	-Faulty outdoor thermistor. -Faulty control cable. -Outdoor temperature is below design conditions. -Outdoor unit air outlet is blocked.	-Replace thermistor. -Repair control cable. -Shut unit off, it cannot work properly. -Remove obstructions.
17.	Unit is in heat mode but operating in cooling.	-Faulty RV coil. -RV coil is ok valve is stuck position.	-Replace RV coil. -Replace the reversing valve.

## 15. OPTIONAL ACCESSORIES

#### 15.1 RCW Wall Mounted Remote Control

15.1.1 The RCW wall mounted remote control can be fitted to a large range and models, It can be used as IR (wirless mode) or wired controler. the RCW can control up to15 indoor units using the same settings (on its wired aplication),

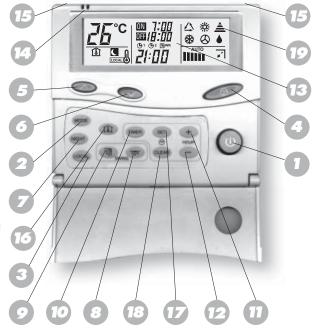

The max wiring length between the controller to the last indoor unit is 300m. for application on WNG LED indoor units an additional interface PCB is needed.

Ordering code no':

RCW – 436195 WNG add' PCB - SP00000290.

#### **REMOTE CONTROL**

- 1. START / STOP button
- 2. Operation mode selection
- button COOLING, HEATING,
- AUTO COOL / HEAT, DRY, FAN.
- 3. LOCAL temperature sensing button
- 4. FAN SPEED and
- AUTO FAN button
- 5. Room temperature UP button
- 6. Room temperature DOWN Button
- 7. NIGHT button
- 8. Airflow direction MANUAL positioning control button
- 9. Airflow direction AUTO-CONTROL button
- 10. TIMER button
- 11. TIMER UP button
- 12. TIMER DOWN button
- 13. LCD operation display
- 14. LOCAL sensor
- 15. Infrared signal transmitter
- 16. ROOM temperature button
- 17. TIMER SET button
- 18. TIMER CLEAR button
- 19. Transmission sign

#### 15.2 RCW2 Wall Mounted Remote Cntrol

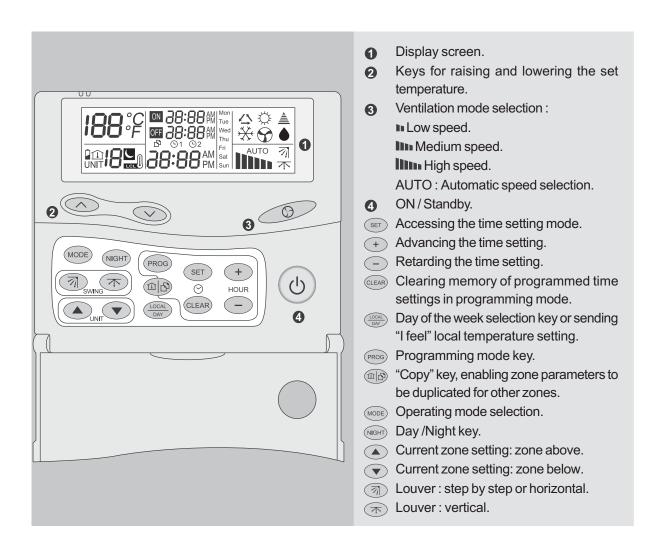

15.2.1 The RCW2 wall mounted remote controler is a wired controler that can provide affective controling management up to 15 different settings and temp' zones.

The RCW2 can be connected up to a max' of 32 units, allowing a max wiring length

of 1000m. for application on WNG LED indoor units an additional interface PCB is needed.

Ordering code no':

RCW2 – SP00000081 WNG add' PCB - SP000000290

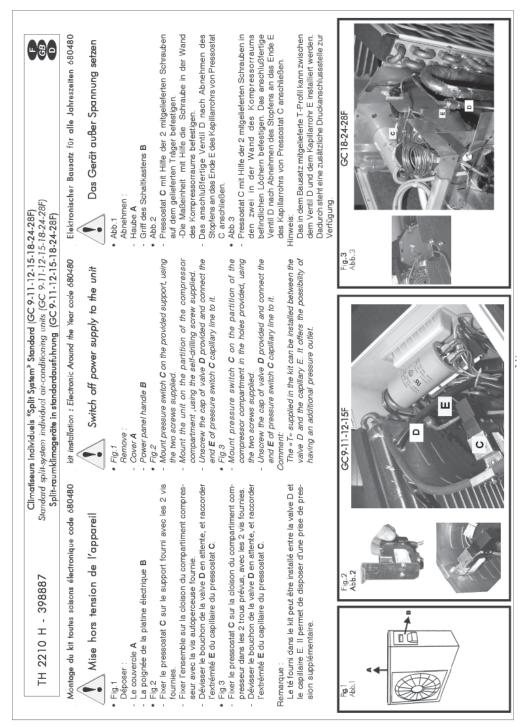

#### 15.3 A.S.K (All Season Kit)

The A.S.K is a pressure regulator to be installed on site in case the working conditions are below the standard operating range of the unit in cooling mode.

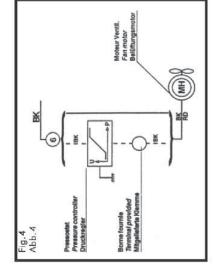

The ASK allows working in cooling at low temp' up to -10 °C for rooms with high internal gains.

For units up to 7.2 KW kit code no' – 7ACFH0077 For units up to 12 KW kit code no' – 7ACFH0078

Documentation as shown on kits :

OPTIONAL ACCESSORIES

	GROUPE DE CONDENSATION (GC 30 F) CONDENSER UNIT (GC 30F) VERFLÜSSIGEREINHEIT (GC 30F)	
KIT TOUTES SAISONS ELECTRONIQUES (680488). Montage du kit. Groupe de condensation GC 30 F (Fig.1). Déposer : - Le couvercle A.	YEAR-ROUND SYSTEM ELECTRONIC KIT (680483). Installation of the kit. GC 30 F Condenser unit (Fig.1). Remove : - Cover A.	EINBAUSATZ ELEKTRONISCHE VERFLÜSSIGER- DRUCKREGELUNG (680488). Einbau. Am Verflüssigerteil GC 30 F (Fig. 1) folgende Teile abnehmen : - Haube A.
<ul> <li>La trappe de raccordement electrique B.</li> <li>Le panneau de côté F.</li> <li>Fixer le pressostat C sur la cloison du compantiment compresseur dans les 2 trous prévus, avec les 2 vis fournies. (Fig.2).</li> <li>Dévisser le bouchon de la valve D en attente, et raccorder l'extré- mité E du capillaire du pressostat C. (Fig.3).</li> <li>Remarque : Le léfourni dans le kit peut être installé entre lavalve D et le capillaire E. Il permet de disposer d'une prise de pression supplémentaire.</li> </ul>	<ul> <li>Electrical connection hatch B</li> <li>Side panel F</li> <li>Mount pressure switch C on the partition of the compressor compartment in the two holes provided, using the two screws supplied (Fig.2).</li> <li>Unscrew the cap of valve D provided and connect the end E of pressure switch C capillary line to it (Fig.3).</li> <li>Comment:</li> <li>The «T» supplied in the kit can be installed between the valve D and the capillary E. It offers the possibility of having an additional pressure outlet.</li> </ul>	<ul> <li>- Elektroanschlußklappe B</li> <li>- Seitenpanel F</li> <li>- Seitenpanel F</li></ul>
Déconnecter le fil noir (moteur) de la borne 6 du bornier de raccor- dement et le raccorder au connecteur avec le fil 2 du câble du pressostat. Raccorder le 2 <sup>eme</sup> fil noir (marqué 1) du pressostat à la borne 6 du bornier de raccordement précedemment libérée.	Electrical connections. On the terminal board. Disconnect the black wire (motor) from terminal 6 on the terminal board and connect it to the connector with the wire N°2coming from the pressure switch.	Elektrische Anschlüsse. An der Anschlußklemmleiste. Das schwarze Kabel (Motor) von Klemme 6 der Anschlußklemmleiste abklemmen und an die Steckverbindung des von dem Pressostat kommenden Nr2 Kabels anschließen.
Vérifier l'absence de fuite au niveau de la valve. Remonter le panneau F, le couvercle A et la trappe B.	Connect the second black wire (mark 1) of the pressure switch to terminal 6 on the terminalboard that is now free. Check that there is no leak in the vave. Replace panel F, cover A and hatch B.	Das 2. schwarze Kabel (1) des Pressostat an die zuvor freigewordene Klemme 6 der Anschlußklemmleiste anschließen. Prüfen, daß an dem Ventil keine Leckage auftritt. Seitenpanel F, Haube A und Klappe B wieder montieren.
Fig.1 Abb.1	Fig.2 Abb.2 B
