- 4. Disassembly and Reassembly
- 5. Troubleshooting
- 6. Exploded Views and Parts List
- 7. PCB Diagrams
- 8. Wiring Diagrams

# 1. Precautions

- 1. Warning: Prior to repair, disconnect the power cord from the circuit breaker.
- 2. Use proper parts: Use only exact replacement parts. (Also, we recommend replacing parts rather than repairing them.)
- 3. Use the proper tools: Use the proper tools and test equipment, and know how to use them. Using defective tools or test equipment may cause problems later-intermittent contact, for example.
- 4. Power Cord: Prior to repair, check the power cord and replace it if necessary.
- 5. Avoid using an extension cord, and avoid tapping into a power cord. This practice may result in malfunction or fire.
- 6. After completing repairs and reassembly, check the insulation resistance.

  Procedure: Prior to applying power, measure the resistance between the power cord and the ground terminal. The resistance must be greater than 30 megaohms.
- 7. Make sure that the grounds are adequate.
- Make sure that the installation conditions are satisfactory.
   Relocate the unit if necessary.
- 9. Keep children away from the unit while it is being repaired.
- 10. Be sure to clean the unit and its surrounding area.

# 3. Operating Instructions and Installation

# **3-1 Operating Instructions**

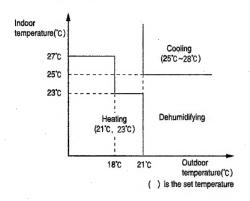

# 3-1-1 Name & Function of Key in remote controller

NO	FEATURE OF KEY	FUNCTION OF KEY		
1		Power On/Off button to start and stop airconditioner or timer set up.		
	(UP)	Temp. up button. To increase the temperature by the the temperature button.	e pressing	
2	(DOWN)	Temp. down button. To decrease the temperature by the temperature button.	y the pressing	
3	Mode	MODE is changed in the following order.	: Auto Mode 《参 : Fan Only : Cool Mode 《禁 : Heat Mode : Dry Mode	
	Turba (©)	Press until the appearance, the air conditioner the room as quickly as possible.  After 30minutes, the airconditioner is reset automa		
4	(uno/e)	Press until the appearance, the sleep timer can be used when you are cooling or heating your room to switch the air conditioner off automatically after a period of six hours.		
5	¥.	Each time you press this button, FAN SPEED is changed in the following order.  *****		
6	(13)	Adjust air flow vertically.		
7	On Timer	The ON Timer enables you to <b>switch on</b> the air conditioner automatically after a given period of time that is from 30 minutes to 24 hours. To cancel, press the (Set/Cancel) button.		
8	Off Timer	The Off Timer enables you to <b>switch off</b> the air conditioner automatically after a given period of time that is from 30 minutes to 24 hours.  To cancel, press the (Set/Cancel) button.		
9	5 Way	To select the 5 way function with the remote control, press the (5 way) button one or more times until the desired mode is selected. Each time you press the (5 way) button, each 5 way indicator on the indoor unit lights up in order.		

#### 3-1-2 Name & Function

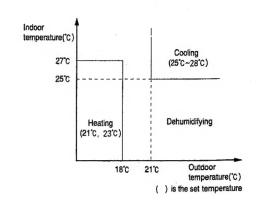

- 1. AUTO CHANGEOVER FUNCTION:
  - \*To operate in the "Auto change over" mode, set the MODE on "AUTO".
  - \*According to the outdoor and indoor temperatures while starting the operation, one of the modes from the cooling, dehumidifying and heating is selected automatically to operate. \*The operation mode shall be set again if the other condition different from that of the operating conditions(cooling, heating, dehumidifying mode) is kept for 60 minutes during the
  - 1) Mode selection for operation start

change-over operation.

Outdoor temperature	Indoor temperature	Operation type	Set temperature	Wind volume
21°C over	31°C over 29°C over 31°C less 27°C over 29°C less 25°C over 27°C less	Cooling	28°C 27°C 26°C 25°C	Automatic
21°C over	25°C less		to be set automati- cally by controller	
18°C over 21°C less	23°C over	Dehumid- fying		
18°C less	27°C over		start.	
18°C over 21°C less	23°C less		to be set automati- cally by controller according to the	
18°C less	27°C less	Heating	indoor temperature at the operation start.	
			23°C 21°C	

#### 2) Mode selection during the operation

Outdoor temperature	Indoor temperature	Operation type	Set temperature	Wind volume
21°C over	31°C over 29°C over 31°C less 27°C over 29°C less 25°C over 27°C less	Cooling	28°C 27°C 26°C 25°C	Automatic
21°C over	25°C less		to be set automati- cally by controller	
18°C over 21°C less	All area	Dehumid- fying		
18°C less	27°C over		start.	
18°C less	21°C over 23°C less 21°C less	Heating	23°C 21°C	

- 2. COOL MODE: The unit operates according to the difference between the setting and room temperature.(setting Temp.: 18°C~30°C)
- 3. HEAT MODE: The unit operates according to the difference between the setting and room temperature.(setting Temp.: 16°C~30°C)
  \*Prevention against cold wind: For about 3~5 minutes after initial operation (thermo control or "de-ice"), the indoor fan will either not operate or operate very slowly, then switch to the selected fan speed. This period is to allow the indoor unit's heat-exchanger to prewarm until emitting warm air.

\*High temperature release function: The outdoor unit and compressor ON/OFF is controlled for safety operation when heat exchanger of indoor unit is over heated.
\*De-ice: Deicing operation is controlled by outdoor unit's heat exchanger temperature and accumulating time of compressor's operation.

De-ice ends by sensing of the processing time by de-ice Condition.

#### 4. DRY MODE:

\*According to the difference between the set temperature (Ts) and indoor temperature (Tr), the operation frequency of compressor is controlled as each area. (Cooling area/COMPOT ON/OFF area/Monitoring area)

- → Cooling area: same as the cool mode
- → COMP<u>or</u> ON/OFF area: repeat of COMP<u>or</u> frequency 36[Hz] for 4 minutes operation/0[Hz](off) for 6 minutes
- → Monitoring area : COMPor off.
- 5. TURBO MODE: This mode is available in AUTO, COOL, HEAT, DRY, FAN MODE. When this button is pressed at first, the air conditioner is operated in "powerful" state for 30 minutes regardless of the set temperature, room temperature. When this button is pressed again, or when the operating time is 30 minutes, turbo operation mode is canceled and returned to the previous mode.
  \*But, if you press the TURBO button in DRY or FAN mode, it is changed into AUTO mode automatically.
- 6. SLEEP MODE: Sleep mode is available only in COOL or HEAT mode. The operation will stop after 6 hours. \*In COOL mode: The setting temperature is automatically raised by 1°C each 1hour When the temperature has been raised by total of 2°C, that temperature is maintained.

\*In HEAT mode: The setting temperature is automatically droped by 1°C each 1hour. When the temperature has been droped by total of 2°C, that temperature is maintained.

7. FAN SPEED: Manual (3 step), Auto (4 step)
Fan speed automatically varies depending
on the difference between setting and the
room temperature.

#### 8. COMPULSORY OPERATION:

For operating the air conditioner without the remote controller, the tact key in indoor unit can be used.

When started with this key, the mode is set on "AUTO".

The operating is the same function as AUTO MODE in the remote controller. Each time you press this key, 5WAY function is changed in the following order; STD(standard) → NATURE → POWER(High-speed) → Saving(Power-Saving) → SILENCE

- \* STD(standard)( ): General operation Mode
- \* NATURE(©): The unit is operated according to health pattern control
- \* POWER( ): The unit is operated in powerful state
- \* SAVING( ): The unit is operated in power saving state
- \* SILENCE( ): The unit is operated quitely

Each mode has Auto(Cool or Heat) operation designed in advance.

9. SWING: BLADE-H is rotated vertically by the stepping motor.

\*Memory louver: When ON/OFF button is pressed at stop state, the BLADE-H returns to its original location which is operating state before stop.

\*Swing Set: Press the Dbutton under the remote control is displayed on LCD the Dand the blades move up and down. If the one more time press the Dbutton, blade location is stop.

10. 24-Hour ON/OFF Real Setting Timer. : The air conditioner is turned ON at a specified time using ...

\*ON TIMER: Only timer LED lights on. \*OFF TIMER: Both timer and operation LED lights on.

#### 11. SELF Diagnosis

12. BUZZER SOUND: Whenever the ON/OFF button is pressed or whenever change occurs to the condition which is set up or select, the compulsory operation mode, buzzer is sounded "beep".

#### 3-2-1 Selecting Area for Installation

Select an area for installation that is suitable to the customer's needs.

#### 3-2-1(a) Indoor Unit

- 1. Make sure that you install the indoor unit in an area providing good ventilation. It must not be blocked by an obstacle affecting the airflow near the air inlet and the air outlet.
- Make sure that you install the indoor unit in an area allowing good air handling and endurance of vibration of the indoor unit.
- Make sure that you install the indoor unit in an area where there is no source of heat or vapor nearby.
- 4. Make sure that you install the indoor unit in an area from which hot or cool air is spread evenly in a room.
- 5. Make sure that you install the indoor unit in an area away from TVs, audio units, cordless phones, fluorescent lighting fixtures and other electrical appliances (at least 1 meter).
- Make sure that you install the indoor unit in an area which provides easy pipe connection with the outdoor unit, and easy drainage for condensed water.
- 7. Make sure that you install the indoor unit in an area which is large enough to accomodate the measurements shown in figure on the next page.

#### 3-2-1(b) Outdoor Unit

- Make sure that you install the outdoor unit in area not exposed to the rain or direct sun light. (Install a separate sunblind if exposed to direct sun light.)
- Make sure that you install the outdoor unit in area allowing good air moment, not amplifying noise or vibration, especially to avoid disturbing neighbours.
   (Fix the unit firmly if it is mounted in a high place.)

- Make sure that you install the outdoor unit in area providing good ventilation and which is not dusty. It must not be blocked by any obstacle affecting the airflow near the air inlet and the air outlet.
- 4. Make sure that you install the outdoor unit in area free from animals or plants.
- 5. Make sure that you install the outdoor unit in area not blocking the traffic.
- Make sure that you install the outdoor unit in area easy to drain condensed water from the indoor unit.
- 7. Make sure that you install the outdoor unit in area which provides easy connection within the maximum allowable length of a coolant pipe(15 meters).

#### Note

- 1. Add 20 grams of refrigerant (R-22) for every 1 meter if the pipe length exceeds the standard pipe length of 5 meters.
- Maintain a height between the indoor and outdoor units.
- 8. Make sure that you install the outdoor unit in an area which is large enough to accommodate the measurements.

#### 3-2-1(c) Remote Control Unit

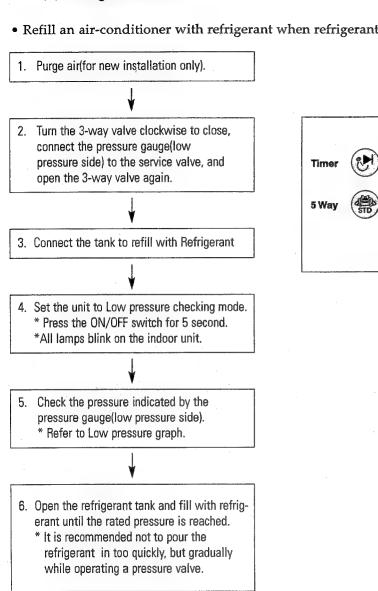

- Make sure that you install the remote control unit in an area free from obstacles such as curtains etc, which may block signals from the remote control unit.
- 2. Make sure that you install the remote control unit in an area not exposed to direct sunlight, and where there is no source of heat.
- 3. Make sure that you install the remote control unit in an area away from TVs, audio units, cordless phones, fluorescent lighting fixtures and other electrical appliances (at least 1 meter).

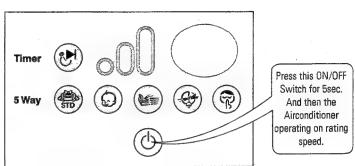

#### Caution:

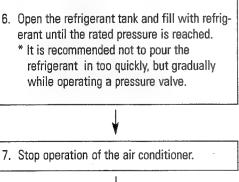

It is harmful to the air conditioner if it is used in the following environments: greasy areas (including areas near machines), salty areas such as coast areas, areas where sulfuric gas is present such as hot spring areas. Contact your dealer for advice.

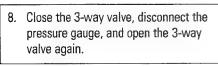

#### 3-2-2(a) Refrigerant Refill

• Refill an air-conditioner with refrigerant when refrigerant has been leaked at installing or using.

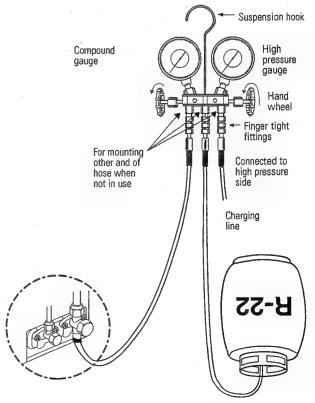

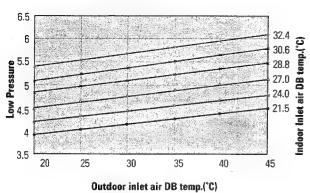

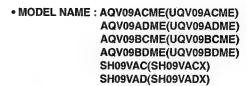

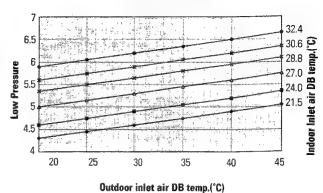

# 3-2-2(b) Refrigerant Adjustment

Class	For in	stallation	For service	
Connection Pipe Length	Air-Purge Method	Refrigerant Adjustment	Air-Purge Method	Refrigerant Quantity
5m (standard)	Refer to the detailed Air-Purge Procedure	Unnecessary	Purge air using a vaccum pump	refer to specification sheet
6~15m		Add 20g of refrigerant (R-22) for every 1m.	or an additional refrigerant cylinder.	Add 20g of refrigeran (R-22) for every 1m.

# 3-2-2(c) Flare unt fixing torque

Outter diameter	Torque	(kg-cm)
outler diameter	Fixing Torque	Final Torque
ø 6.35 (9000Btu, 12000Btu) (Liquid Side)	160	200
ø 9.52 (9000Btu) (Gas Side)	300	350
ø 12.7 (12000Btu) (Gas Side)	500	550

# 4. Disassembly and Reassembly

Stop operation of the air conditioner and remove the power cord before repairing the unit.

# **4-1 Indoor Unit**

# 5. Troubleshooting

Since the inverter air conditioner is equipped with Electrical control circuits at both Indoor & outdoor unit, the trouble shooting shall be performed according to the error mode.

Inside the controller of the outdoor unit (inverter), the large capacity of electrolytic condenser so that it takes the time to discharge after the power off since the electrical charge remains (the charging voltage DC 340V).

Take care of the electrical shock by contact on the charging part before the discharge after the power off. (It takes approximately 2 minutes to discharge).

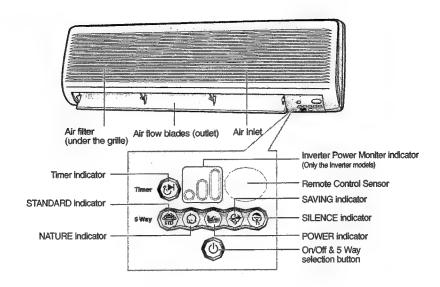

# 5-1 Basic items for trouble shooting

- Is the power source proper?
   The power source shall be in the range of the rated voltage ±10%. If it is out of this range, it may cause the abnormal operation.
- 2) Is the connection made between the indoor and outdoor unit?

  The connection between indoor and outdoor unit shall be performed with 4 wire. (connection cable of indoor and outdoor unit + ground wire).
- 3) The phenomena as follows are not out of order.

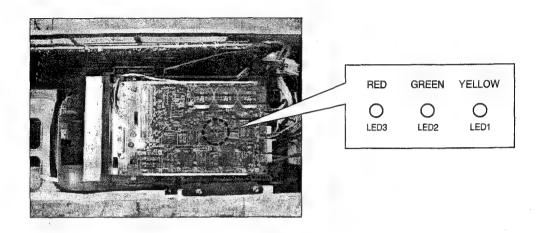

N0	Phenomena	Cause and reason
1	The operation is not done.	<ul> <li>Is the power off or the power unplugged?</li> <li>Does it stop because it is the completion time?</li> <li>Unplug and plug again the power source for 2 minutes.</li> </ul>
2	The wind comes out but the heating/cooling is not performed.	<ul> <li>Is the filter clogged with dust or dirty?</li> <li>Is there any direct light on the outdoor unit or any obstacle against it?</li> <li>Is the selected temperature too high? Lower the selected temperature lower than the current one (during cooling).</li> <li>Is the selected temperature too low? Raise the desired temperature than the current one (during heating).</li> <li>Is the "Fan only Mode" operation?</li> </ul>
3	The remote controller does not operate.	<ul> <li>Is the battery run out?</li> <li>Is the battery inserted in the wrong way(+, -)?</li> <li>Is the detection part of the indoor unit blocked?</li> <li>Does it interfered with the radio of neon sign?</li> </ul>
4	The wind volume is not adjusted.	<ul> <li>Is the operation selected among one of Auto / Dry / Turbo / Sleeping?</li> <li>The temperature setting is not required since the wind volume set automatically.</li> <li>Check again at the state of Cooling / Fan only / Heating.</li> </ul>
5	The temperature is not set.	<ul> <li>Is the operation selected among the Dry / Turbo / Sleeping / Fan only Mode.</li> <li>Since the temperature is automatically set, the temperature setting is not required.</li> <li>Check again at the cooling/heating state.</li> <li>The standard temperature ±2°C during the automatic operation.</li> </ul>
6	The operation lamp continues to be flickering.	Push the Operation / Stop button.     Unplug and plug the power source.
7	The immediate operation starts without control of remote controller when plugged	<ul> <li>It is the case that the auto restart function works.</li> <li># Auto restart function is the convenient function where the operation state is memorized in the Memory IC during the blackout and the operation restarts when the power comes back.</li> </ul>

Samsung Electronics

#### 5-3-1 Check of indoor unit control board

Dupling the power cord and plug it after 5 seconds. □

- > Press the on/off switch located in indoor unit inside to operate the air conditioner.
- If the air conditioner operates, check the remocon and indoor unit display board.
- If the air conditioner does not operate, check according to the sequence of the followings:

⊳ Check sequence of indoor unit control board

- Step 1 : Check whether two wires of power cord (Sky-blue, brown) are connected correctly to the terminal block.
  - •Sky -blue : connected to "N"
  - Brown: connected to "L"
- Step 2: Check whether the wire connected to the terminal block is connected correctly to the control board.

(Control board) (Terminal block)

JN SKY-BLU N SKY-BLU (N1)

RY71 BRN L

RY71 ORG 1

JC BLK 2

Step 3 : Check whether the fuse (F701)(F702) on the control board is normal. (5 [A]/250[V]:F701) (1[A]/250[V]:F702)

• If the fuse is broken, replace it with the new one.

Step 4: check the output of SMPS on the control board.

• Input power AC187~AC264V—IC 02 Input: DC 12V

IC 02 Output: DC 5V

## 5-3-2 Display board and remocon check of indoor unit

- > Check whether the connection wire of Display board is correctly connected to CN91 connector.
- > Check the voltage of remocon battery. the voltage of one battery shall be higher than about 1.4 V, and then the remocon operates normally.
- Description Check whether the neon sign is on and the 3 wave long fluorescent lamp is on around the indoor unit. After putting all lamps of the indoor out and then operate it by remocon. If it operates with the remocon, it is the abnormality due to the interference from the light of lamps. (Aircon unit is normal).

## 5-3-3 Check the indoor temperature sensor and indoor heat exchanger temperature sensor.

Take out the thermistor connected to the connector (CN41) of control board of indoor unit and measure the resistance between two wires and if it is same as follows: it is normal but if not, replace it.

Ambient temperature (°C)	15°C	20°C	25°C	30°C	35°C	40°C
Resistance of thermistor [KΩ]	14.68	12.09	10	8.31	6.94	5.83

#### 5-3-4 Check of indoor unit fan motor

- Description > Check whether the wire of fan motor is connected to the connector of control board (CN42, CN71) of indoor unit.
- > Check whether the error mode displays after the strong revolution for approximately 15 seconds since aircon is on.
  - → In case the error mode displays after the fan motor is rotating for 15 seconds → Defect of HALL IC of fan motor and Control board
  - → In case that the error mode displays without running of fan motor after 15 seconds. → Operate with the pin of SSR(SS71) short of indoor unit control board and then if the fan motor does not run, it is the fan motor defect.

If it rotates, it is the defect of control board (SS71, IC05, IC04).

#### 5-3-5 Check of communication line between the indoor unit and outdoor unit

#### (Communication error mode)

- 1) Check of connection
  - Check whether the cable wire connecting the indoor unit with outdoor unit is correctly connected to the (N1), 1, 2 terminal. (If the wire is connected reversely, the communication error occurs)
  - ▶ If the cable connecting the indoor unit and outdoor unit is longer than 20m, error mode occurs (shorten the cable length).

#### (Check of indoor unit)

▶ Check whether the connection wire of the terminal block and control board of indoor unit is correct.

JC	BLK	_ 2				

#### (Check of outdoor unit)

▷ Check whether the connection wire of the terminal block and control board of outdoor unit is correct.

2) Check of power supply to the outdoor unit

After operation of aircon, select the turbo mode and approximately 3minutes later, check whether the red color lamp of control board (to be seen if the top cover of outdoor unit) is on.

- → If the red lamp (LED 3) is not on, check the power part of control board of outdoor unit.
- ♦ Check the connection of reactor.
- → If the red lamp (LED3) is on and green lamp is flickering, it is normal.

#### 5-3-6 Check of discharge temperature sensor and comp top OLP temperature sensor.

Connector of outdoor unit control board (PIN#3,4 of CN51 - discharge temperature sensor), (PIN#1,2 of CN52-OLP Temperature sensor) Measure the resistance between two wires and if it is same as follows, it is normal but if not, replace.

Ambient temperature (°C)	0°C	10°C	20°C	30°C	40°C	50°C	
Resistance of thermistor [KΩ]	553	362	242	166	165	82	4 ,

## 5-3-7 Check the deice temperature sensor and outdoor temperature sensor

Connector of outdoor unit control board (PIN#1,2 of CN51 - outdoor temperature sensor), (PIN#3,4 of CN52-deice Temperature sensor) Measure the resistance between two wires and if it is same as follows, it is normal but if not, replace it.

Ambient temperature (°C)	15°C	20°C	25°C	30°C	35°C	40°C	7
Resistance of thermistor [K $\Omega$ ]	14.68	12.09	10	8.31	6.94	5.83	. *

#### 5-3-8 Check of operation current abnormal increase mode

- ▶ The operation abnormal current mode is the protection control for the safe operation by detecting the operation current of inverter aircon by the current sensor on the control board.
- ▶ If the operation current abnormal increase occurs,
  - ◆The ventilation is not good because the outdoor unit is installed wrong (the ambient temperature is higher than 50 °C)
    - → Reinstall the outdoor unit so that the good ventilation can be made.
  - ♦ If the Refrigerant is overcharged.
    - → Check the amount of Refrigerant.
  - ♦ If the comp is locked.
    - $\rightarrow$  Replace the comp.
  - ♦ If the comp is operating without the revolution of fan motor.
    - → Check the fan motor connector, replace the fan motor.
  - ♦ If the protection cover is operating with bending to the outdoor.
    - → Take out the protection cover.
  - ♦ If two outdoor units are operating face to face. (the bad ventilation is made)
    - → Reinstall the outdoor unit for the good ventilation.
  - ♦ The air circulation is bad due to the attachment of falling leaves
    - → Take away the leaves for the good ventilation.

#### 5-3-9 Check of instantaneous over-current protection of IPM circuit.

- > Inverter instantaneous over-current protection mode is the mode to be actuated in order to prevent the damage of elements from the peak current of IPM circuit elements.
- ▷ In case that the inverter circuit instantaneous over-current protection mode actuates, check the following items.

#### (Condition of installation)

- ◆The ventilation is not good because the outdoor unit is installed wrong (the ambient temperature is higher than 50 (°C))
  - $\rightarrow$  Reinstall the outdoor unit so that the good ventilation can be made.
- ♦ In case that the operation is made with the cover bent of the outdoor unit.
  - → Take out the cover.
- ♦ If two outdoor units are operating face to face, (the bad ventilation is made)
  - → Reinstall the outdoor unit for the good ventilation.
- ♦ The air circulation is bad due to the attachment of falling leaves.
  - → Take away the leaves for the good ventilation.
- ♦ If the Refrigerant is overcharged.
  - → Check the amount of Refrigerant.

#### (Unit defect)

- ♦ If the comp is locked.
  - → Replace the comp.
- ♦ If the comp is operating without the revolution of fan motor.
  - → Check the fan motor connector and replace the fan motor.
- ♦ In case the parts of the control board is damaged.
  - → Replace simultaneously the inverter control board.

## 5-3-10 Check of the comp discharge gas temperature and OLP temperature abnormal rise.

- ▶ If the comp discharge gas temperature and OLP temperature rises higher than a certain level, it protects the circuit.
- ▶ If the comp discharge gas temperature and OLP temperature rises abnormally, check the following items.

#### (Condition of installation)

- ◆The ventilation is not good because the outdoor unit is installed wrong (the ambient temperature is higher than 50 (°C))
  - → Reinstall the outdoor unit so that the good ventilation can be made.
- ♦ In case that the operation is made with the cover bent of the outdoor unit.
  - $\rightarrow$  Take out the cover.
- ◆If two outdoor units are operating face to face, (the bad ventilation is made)
  - → Reinstall the outdoor unit for the good ventilation.
- ♦ The air circulation is bad due to the attachment of falling leaves
  - → Take away the leaves for the good ventilation.
- ♦ If the refrigerant is insufficient.
  - → Fill up the amount of refrigerant.

#### (Unit defect)

- ♦ If the comp is locked.
  - $\rightarrow$  Replace the comp.
- ♦ If the comp is operating without the revolution of fan motor
  - → Take out the protection cover.
  - → Check the fan motor connector and replace the fan motor.

# **5-4 Fault Diagnosis of Major Parts**

Parts	Diagnosis								
♦ Indoor "Temp.Sensor"	Measure resist	ance with a tester.							
♦ Indoor "Heat ex. Sensor"	Normal	Ambient temperature	15°C	20°C	25°C	30°C	35°C	40°C	
<ul><li>◆ Outdoor "Temp.Sensor"</li><li>◆ Outdoor "Deice Temp. Sensor"</li></ul>		Resistance of thermistor[KΩ]	14.68	12.09	10	8.31	6.94	5.83	
	Abnormal	∞, 0 Ω open or short	t	·					
Outdoor "Discharge	Normal	Ambient temperature	0°C	10°C	20°C	30°C	40°C	50°C	
Temp.Sensor"		Resistance of	553	362	242	166	165	82	
◆ Outdoor "OLP Temp.Sensor"		thermistor[KΩ]							
	Abnormal	∞, 0 Ω open or short	t						
Indoor Fan Motor	Measure resist	ance between terminals (CN	72) with a	tester	•				
	Normal	At ambient temperature	(10°C ~ 3	0°C)	ÇD.				
		between	Vo	oltage					
		Red, Blue		0±10%		Main		4,	
		Red, Yellow	32!	5±10%		Sub			
	Abnormal	∞, 0 Ω open or short	t			."		· · · · · · · · · · · · · · · · · · ·	
	Measure the vo	oltage between ground and s	ignal wire	of the far	n motor				
	Normal	between	Vo	oltage					
•		Gray, Orange	0.5	V~4.5V					
		Yellow, Orange		5V					
	Abnormal	Abnormal if voltage does	not chan	ge from 0	V to 5V.				
Outdoor Fan Motor	Normal	At ambient temperature	(10°C ~ 3	0°C)

		Black, Red		2	75±10%			Main	
Black, White		3	50±10%			Sub			
	Abnormal	$\infty$ , 0 $\Omega$ open or short	t						
Stepping Motor	Measure resist	Measure resistance between red wire and each terminal.							
(UP/DOWN swing motor)	Normal	Approx. 380Ω at ambient temperature (20°C ~30°C)							
	Abnormal	∞, 0 Ω open or short	t						

 $\mbox{\#}$  If you make the replacement of the ASS'Y CONTROL-IN or MAIN PCB , Be sure to be set up the model option as follow the steps

Remote controller operation method as per the step	Applicable key	Display status
1st step Method) ① Remove the battery of remote controller ② Press the temperature raise/down key simultaneously ③ Insert the battery again (Result) If the screen of remoch displays as shown in the right, go to the second step		
2nd step Method) If the first digit of LCD is 0 on the remocon screen, go to the 3rd step.  * If it is 1, press the mode key once to change to 0 and go to the 3rd step.	S WAY)	
3rd step Method) Press the marked key to input the option number. example) 021E31  Result) Go to 4th step if it displays as shown in the right (The number increases from 1~9, and A, b, C, d, E, F whenever pressing the key.)	Words  A  A  B  Con Iner  Con Iner	

Remote controller operation method as per the step	Applicable key	Display status
4th step Method) After completion of 3rd step, and if the MODE KEY is pressed once, 1. 1~3 steps are saved internally 2. If the first number at the time is "1", it is correct and so go to 5th step  If pressing mode key and the first digit becomes 0, the screen of 1~3 steps can be seen.	Mode A A A A A A A A A A A A A A A A A A A	
5th step Method) Pressing the marked key to input the option number. example) 142285  Result) If it displays as shown in the right go to the 6th step	Wicde A A WAY STATE OF THE PARTY OF THE PART	
6th step Method) When pressing the operation ON/OFF key with the direction of remote controller for set, the sound "Ding, or Diriring is heard and then the input of option is completed.  ** Refer to the right side if the error appears.	ERROR MODE  1. When the lamps of (STANDARD(♠), NATURE(♠), TIMER(♠) is flickering → failute of option input After removing the set power cord and insert it again, pressing the operation on/off key to retry and if the condition is same, EPROM is deffcective or misinsertted. So replace the PCB.	2. When all lamps of indoor unit( ♣ ♠ ♠ ♠ ♠ ♠ ♠ ♠ ♠ ♠ ♠ ♠ ♠ ♠ ♠ ♠ ♠ ♠ ♠
